app, enabling existing DeFi and gaming ecosystems, and more, to connect to **85+ apps** and more in development.

Sui will be the first blockchain based on the **Move** programming language to support native **USDC** and **CCTP**. As a general-purpose blockchain, Sui enables developers to build apps for a variety of use cases, including DeFi, gaming, DePIN, and ecommerce. With the arrival of native USDC, developers can build with the largest regulated¹ dollar-backed stablecoin in the industry. Additionally, CCTP will enable developers to design cross-chain experiences by connecting their Sui apps to additional blockchains including Arbitrum, Base, Ethereum, Solana, and more. With no need to lock up liquidity, CCTP provides a highly secure and capital-efficient way to transact with USDC across supported blockchains.

Currently, Bridged USDC (from Ethereum) is the largest stablecoin on Sui, with more than \$260M in circulation.² Sui will work with ecosystem apps, such as Wormhole, to provide a smooth transition of liquidity from bridged USDC to native USDC over time.³ There will be no immediate changes to Wormhole's Portal bridge and it will continue to operate normally. Additionally, ahead of the launch of native USDC, the Ethereum-bridged form of USDC on block explorers will be renamed to "wUSDC". There will also be outreach to ecosystem apps to make the same change in their app UI and documentation.

Benefits of native USDC

- Regulated, fully reserved and redeemable 1:1 for US dollars¹
- Enables institutional on/off-ramps like Circle Mint for eligible users
