Re: Support for Sol Naming Limited's Application for the .sol Community Top-Level Domain

Dear ICANN Review Panel:

I write on behalf of SNS, which operates the Web3 name service for .sol on Solana, in support of Sol Naming Limited's application for the .sol community generic top-level domain.

1. Our Role in the Solana Community

SNS is an active participant in the Solana ecosystem. We serve developers, users, and ecosystem participants and support the continued growth, adoption, and development of Solana.

As of 1 July 2026, based on the on-chain ownership records, the legacy .sol registry comprised 449,663 domains associated with 288,506 distinct wallets. Through this role, we interact with and support a meaningful segment of the Solana community.

2. Support for .sol

We support the recognition of .sol as a community-aligned top-level domain within the global Domain Name System. The .sol string is a natural and established identifier for the Solana community, and its delegation as a community top-level domain could provide Solana developers, applications, users, and ecosystem participants with a dedicated namespace in the global DNS.

We also support the Solana Foundation's endorsement of Sol Naming Limited as the applicant for the .sol community gTLD.

3. Community Benefit

A community-aligned .sol TLD can help strengthen the Solana ecosystem's identity layer by connecting community-native applications, naming, wallets, users, and other ecosystem participants with the established DNS.

We believe this will benefit the Solana ecosystem by supporting discoverability, trust, interoperability, and community-aligned use of the .sol namespace.

As the Web3 name service for .sol on Solana, we support the recognition of .sol within the global DNS as a natural extension of the .sol namespace and the broader Solana identity layer.

For these reasons, SNS supports Sol Naming Limited's application for the .sol community gTLD and urges ICANN to approve the application.

Sincerely,

Aunchisa Tapanakornvut
CEO, SNS
