Re: Support for Sol Naming Limited's Application for the .sol Community Top-Level Domain

Dear ICANN Review Panel:

I write on behalf of Solflare, a leading self-custodial wallet for Solana, in support of Sol Naming Limited's application for the .sol community generic top-level domain.

1. Our Role in the Solana Community

Solflare is an active participant in the Solana ecosystem. We serve users and ecosystem participants and support the continued growth, adoption, and development of Solana.

Solflare was the first wallet built for Solana and has served the ecosystem continuously since 2020. Today, Solflare serves more than 4 million active users from all parts of the world through its web, browser-extension, and mobile applications, secures billions of dollars in user assets, and is one of the main wallets for Solana staking. We also work closely across the ecosystem — including with Solana Mobile, whose Seeker device ships a Seed Vault Wallet built in partnership with Solflare — and offer Solflare Shield, a dedicated hardware wallet for Solana.

Through this role, we interact with and support a meaningful segment of the Solana community.

2. Support for .sol

We support the recognition of .sol as the Solana community's ICANN-administered domain space. The .sol string is a natural and established identifier for the Solana community, and its delegation as a community top-level domain would provide Solana developers, applications, users, and ecosystem participants with a trusted namespace in the global DNS.

We also support the Solana Foundation's endorsement of Sol Naming Limited as the applicant and ICANN operating partner for .sol.

3. Community Benefit

A community-aligned .sol TLD can help strengthen the Solana ecosystem's identity layer by connecting community-native applications, naming, wallets, users, and other ecosystem participants with the established DNS.

We believe this will benefit the Solana ecosystem by supporting discoverability, trust, interoperability, and community-aligned use of the .sol namespace.

As a self-custodial wallet serving Solana users, we are well positioned to support adoption of .sol among users who rely on human-readable identity and naming tools in the Solana ecosystem.

For these reasons, Solflare supports Sol Naming Limited's application for the .sol community gTLD and urges ICANN to approve the application.

Sincerely,

Vidor Gencel

CEO

Solflare
