

MetaMask developer documentation

Build with the world's leading self-custodial crypto wallet.

What do you want to do with MetaMask?

Connect to MetaMask

Connect your dapp to the **MetaMask browser extension and mobile app**. Interact with users' accounts across **multichain, EVM, or Solana** networks using a single integration.

Create embedded wallets

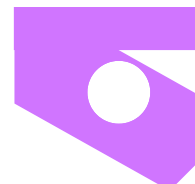

Onboard users to your dapp via **social logins**, or by integrating your own **authentication providers**. No seed phrases required.

Create smart accounts

Create and interact with **MetaMask Smart Accounts**, unlocking new **programmable account behaviors** and granular permission sharing.

Create agent wallets

Give **AI agents programmatic wallet access** via the **MetaMask Agent Wallet CLI**. Transfer, swap, trade, and sign with **mandatory security** on every transaction.

Create a **custom mini app (Snap)** that runs inside the MetaMask extension. Add support for **custom networks**, account types, and APIs.

Contribute to MetaMask on GitHub

Join the MetaMask developer community and learn how to contribute to the MetaMask project itself.
