

Question 156 - Endorsement

Supporting exhibit

Membership and endorsement

MEMBER TYPE	MEMBERS	ENDORSED	SHARE
Individuals	21,355	12,167	57.0%
Organizations	8,453	4,770	56.4%
Total	29,808	16,937	56.8%

Figures are stated at filing. Each endorsement is a letter executed individually by the member concerned.

Endorsing organizations include

Activepieces	Facile.it	The PHP Foundation
Antithesis	Faros AI	Product Hunt
Apify	GoKwik	Replit
Articul8	Grab	RevenueCat
Assembled	HASH	Socket
Brave Software	Hello Identity Co-op	Teleport
Browser Use	Hugging Face	Telnyx
Callstack	IIW Foundation	Text
CivicActions	Kortix AI	Tiger Data
Coder	LatchBio	Tigris Data
CoinFund	The Mifos Initiative	tldraw
Convex	Mixedbread	Upstage
dope.security	NEAR AI	Wasmer
Evil Martians	Outlier Ventures	

Each of these organizations signed through a named representative, from the organization's own domain.

Endorsement letter

An organization endorsement letter follows. The signatory's name, title, contact details and signature have been redacted.

ENDORSEMENT LETTER

.AGENT Community TLD Application — Organisation

Hugging Face

Date: 03/24/2026

To: Community Priority Evaluation Panel, ICANN

Subject: Organisation Endorsement of the .AGENT Community TLD Application

Dear Panel Members,

1. Organisation background

Hugging Face ("the Organisation") is active in software and AI development, including autonomous-agent technology.

Primary segment (*select one*): agent-infrastructure

Organisation size (*optional*): 201-1000

2. Community recognition

We recognise the .agent Community as the worldwide group of developers, companies, and researchers who design, build, deploy, or meaningfully use autonomous software agents and related tooling.

3. Why .AGENT matters

In the AI industry, "agent" refers to autonomous software entities that perceive, reason, and act on behalf of users or other systems. A dedicated .AGENT namespace will:

- Provide a **trust signal** that a domain is operated in connection with legitimate agent technology;
- Improve **discovery and interoperability** across agent ecosystems; and
- Establish **vendor-neutral infrastructure** for a technology category that should not be controlled by any single commercial entity, comparable to the role .edu serves for qualifying universities.

4. Charter alignment

We endorse the .agent Community Charter (current version available at agentcommunity.org/charter). We understand the Charter is a living document subject to community-governed revision, and we support its continued development. We support the principle that any future .agent domain should:

- be intended for use with autonomous-agent technology, and
- provide a public mechanism, consistent with the final Community Guidelines, to demonstrate conformity once those guidelines are adopted.

5. Community stewardship

We support the designation of a community-governed, non-profit-aligned steward to operate the .AGENT registry and to apply Charter-aligned registration policies. We believe this model, open governance with transparent policy development, best serves the long-term interests of the agent technology community.

6. Support and opposition statement

We actively support this community application for .AGENT.

We oppose the allocation of the .AGENT string to any applicant whose governance model would permit exclusive commercial control of the namespace, as this would undermine the open, interoperable character of agent technology infrastructure.

Authorisation

This letter has been approved by a duly authorised representative of the Organisation.
