Re: Support for Sui Naming Limited's Application for the .sui Community Top-Level Domain

Dear ICANN Review Panel:

I write on behalf of **Talus Labs, Inc.**, we are developing a **decentralized protocol on Sui providing infrastructure for autonomous, onchain AI agents**, in support of **Sui Naming Limited's** application for the **.sui** community generic top-level domain.

1. Our Role in the Sui Community

Talus is an active builder in the Sui ecosystem — our protocol runs on Sui mainnet, and we back Sui's growth through development, incubation, and community programs. Specifics:

- **Built on Sui:** Talus Protocol is live on Sui mainnet, with verifiable AI agents executing onchain; backed by the Sui Foundation.
- **Ecosystem programs:** co-host of the Talus/acc accelerator with Sui and Cicada Capital, onboarding new teams to build on Sui; incubator of Doppel Games on Sui.
- **Sui-native integrations & community:** integrated across the Sui stack (Walrus, SuiNS, TradePort, and others), plus our Tallys NFT collection — a top Sui collection (5,555 NFTs).

Through this role, we interact with and support a meaningful segment of the Sui community.

2. Support for .sui

We support the recognition of **.sui** as the Sui community's ICANN-administered domain space. The **.sui** string is a natural and established identifier for the Sui community, and its delegation as a community top-level domain would provide Sui developers, applications, users, and ecosystem participants with a trusted namespace in the global DNS.

We also support **the Sui Foundation's** endorsement of **Sui Naming Limited** as the applicant and ICANN operating partner for **.sui**.

3. Community Benefit

A community-aligned **.sui** TLD can help strengthen the Sui ecosystem's identity layer by connecting community-native applications, naming, wallets, users, and other ecosystem participants with the established DNS.

We believe this will benefit the Sui ecosystem by supporting discoverability, trust, interoperability, and community-aligned use of the **.sui** namespace.

As an application serving users and builders in the Sui ecosystem, we believe **.sui** can support trusted identity, discoverability, and user navigation across community-aligned applications and experiences.

For these reasons, **Talus** supports **Sui Naming Limited's** application for the **.sui** community gTLD and urges ICANN to approve the application.

Sincerely,

Michael Hanono
CEO
Talus Labs, Inc.
